

# Cyber Solutions Technologies

**Cybersecurity | Consulting | Integration | Development**

## The End of Mobile File Vulnerability

### Our Mission

To provide services to protect sensitive data on mobile devices by creating secure and affordable solutions for multiple markets thus preventing attacks on an individual's files and records.

### Our Product

**RecordVault™** is the only app that uses patented, software-based, multi-factor (3FA) authentication with military grade encryption and industry standard file cleaning.

### Our Services

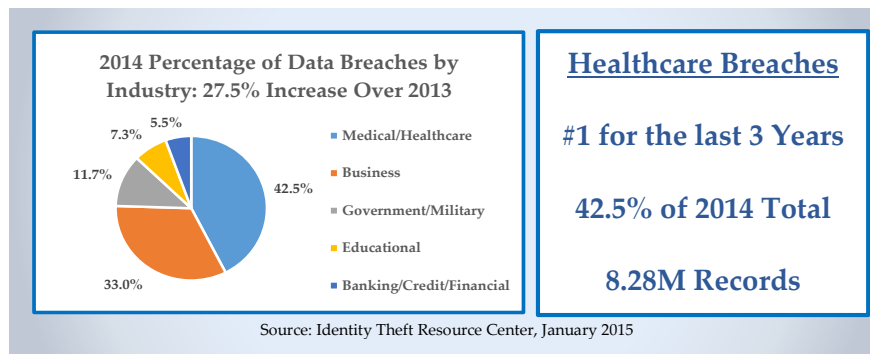

Cyber Solutions Technologies (PerSysTek) is focused on **partnering** with companies who require specialized **cybersecurity solutions consulting, system integration or custom application development** to incorporate the RecordVault technology or product into their systems.

### About Us

Leveraging three decades of innovative, technical product development in Fortune 100 companies, Rick Wielopolski formed PerSysTek and created and patented the RecordVault to protect the world's information.

### Our Solution

The Cyber Solutions Technologies™ mobile cybersecurity solutions enable safe import, export, updates, management, communication and transportation of medical, legal, financial, identity, and education records on phones, tablets, notebooks, laptops and other portable devices.

### Our Technology

This patented technique uses a non-reproducible software key thereby implementing the strongest possible security. The technology is cost effective, requires no additional hardware, locks only selected files and runs on all operating systems.

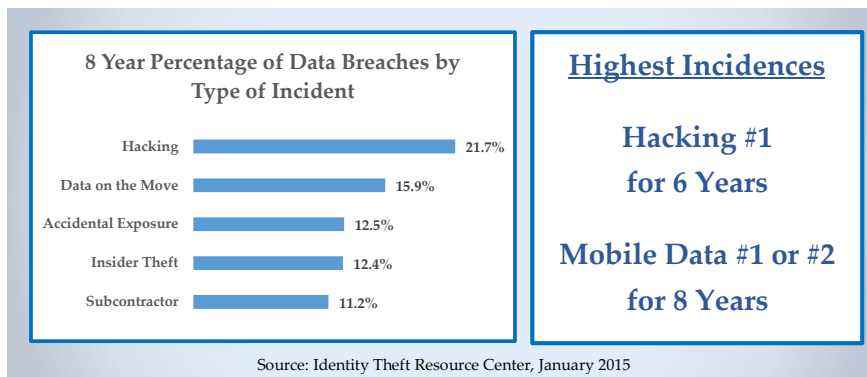

## An Innovative Security Solution

### Why this is Different

The PerSysTek™ RecordVault Passcode (RVP) is **not sent to you over the network!** Each mobile device computes their own “one time” RVP and submit it to the authentication server only for comparison.

### Why Others Fail

Current techniques send One Time Passcodes which have been intercepted. Hardware biometrics, such as fingerprints, are either stored or transmitted and utilize fixed credentials which have been hacked.

### Why it is Secure

The RVP and resultant RecordVault Key that unlock your files are **not stored in the device or server!** They are dynamically computed with patented time-synchronized algorithms and cannot be reproduced. All data is encrypted and memory remnants are cleaned.

### Why Use It

This cost effective, multifactor authentication (3FA) technique is implemented completely in software while fulfilling the standard requirement of possessing something you “Have, Know and Are” to offer maximum security for your environment.

### Why Us

Cyber Solutions Technologies (PerSysTek) is offering corporate pricing, licensing and cybersecurity services for consulting, integration and further application development of the RecordVault™ app and technology to incorporate this patented system and method into client environments.

### About Us

Leveraging three decades of innovative, technical product development in Fortune 100 companies, Rick Wielopolski formed PerSysTek and created and patented the RecordVault to protect the world’s information.
